UK manufacturer and repairer of Surgical Instruments

EXTREMITIES CATALOGUE

**UK manufactured
specialist instruments for
hand and foot surgery**

INTRODUCTION

Surgical Holdings presents a catalogue of instruments designed specifically for surgery on the hands and feet.

Working closely with customers, Surgical Holdings has been able to continually develop and innovate in the surgical instrument field, drawing from the expertise and craftsmanship gained over 25 years trading and over 50 years of family involvement in the surgical instrument manufacturing industry.

Manufacturing only the highest quality instruments from steels complying with British Standards ensures the best performance and longevity. Furthermore, utilising metallurgical testing, tracking and traceability of materials and 100% inspection procedures provides transparency and reliability.

Surgical Holdings' workshop is situated in Southend-on-Sea just 40 miles from London, easily accessible by two main train lines (London Fenchurch Street and London Liverpool Street), by road (A13 and A127) or even by air (London Southend Airport). They welcome customers and visitors from all over the world and are always happy to provide a tour of their manufacturing facility.

BESPOKE FIXATION

Instruments of this quality and precision should be maintained and protected. We can provide bespoke fixation for any set in a secure din basket. The instruments are mounted in a medical grade plastic runner to prevent damage during washing and transport.

DUO SURFACE FINISH

Surgical Holdings have utilised their combined expertise and knowledge to introduce a new and exclusive DUO surface finish.

By reviewing research and understanding the requirements of their customers they have combined two surface finishes on to one instrument. The first maintains anti-glare under theatre lights and the second ensures the best possible cleaning efficacy.

The company's highly skilled instrument finishers ensure that prior to any final stage finishing, all instruments receive a high level mopping to remove any imperfections.

From there they can then apply:

The wet bead blast finish

this technique uses ultra-fine glass beads sprayed at the surface of the instrument to create a matt looking finish.

The mirror polish finish

this technique uses a series of mops and compounds to polish the surface up to a mirror finish.

The result is a premium looking instrument which stands out, maintains functionally under theatre lights but above all has been proven to provide benefits against protein adhesion and corrosion.

QUALITY ASSURANCE

Surgical Holdings is an ISO 9001 and ISO 13485 accredited company. Its comprehensive quality management system is in accordance with the requirements of the Medical Device Directive 93/42/EEC - Annex I & II, for temporary orthopaedic surgical implants - skeletal pins, wires, staples, guide wires - and all associated instrumentation.

The company has compliance to manufacture and CE mark all Class I instrumentation, Class IIa and IIb implants, and can provide certificates of conformity for all materials used. All Surgical Holdings products undergo rigorous testing and inspection to applicable harmonised standards before leaving the factory. Complete traceability throughout all aspects of the production process provides the customer with access to a fully documented quality control system.

All instrumentation carries a lifetime guarantee from the date of purchase on any fault found as a result of poor materials. This warranty is void, however, if repairs are carried out by anyone other than Surgical Holdings repair personnel, or if it is deemed to have been misused.
