

Dissecting & Tissue Forceps

Often very delicate teeth that must mesh (check this) and ensure these are correct vs the tray list

1-2 teeth 3-4 teeth

Serrated jaw

Check for cracking around the rivet area. Ensure forceps do not 'cross over'

Very delicate and can be damaged by heavier items

Try to learn the common ones as there are slight differences
i.e. Gillies has teeth with horizontal hand grips whilst McIndoe has serrated jaws and longitudinal grips
